Melt Pressure Measuring Chain

with 1/2" 20 UNF thread, for pressures up to 3 000 bar

Industrial measuring chain consisting of a melt pressure sensor with integral or removable cable, and amplifier designed to match the sensor.

Operating range 0 ... 3 000 bar and 0 ... 350°C

- Melt temperature up to 350°C
- Melt pressure up to 3 000 bar
- Records even extremely short duration pressure peaks
- · Does not contain any transmission medium
- Abrasion-resistant diaphragm
- Measuring chain with pressure and temperature measurement

Description

This measuring chain can be used to measure pressure and temperature simultaneously. It consists of a factory-calibrated sensor, cable and amplifier. The sensor has a very stable, high temperature resistant, piezoresistive, silicon measuring element immediately behind a diaphragm of robust steel 1.4542 (for high pressure sensor) or steel alloy 2.4692 (for low pressure sensor).

Application

The measuring chain is designed to record the melt pressure in injection molding machines and hot-runner systems. It is also suitable for static pressure measurements in polymer pumps or other applications. The sensor can be mounted directly in the flow of material. This has the advantage of eliminating the time lag characterizing indirect measuring systems and enabling direct measurement of the process parameters determining product quality. Integration of the measurement signals into the machine's control system to record or control production processes provides a practical means of enhancing production efficiency.
